## HOKITIKA '17

Well another fantastic weekend away in Hokitika for the annual Queens Birthday flyin! Great turn out from the Kaiapoi MAC, some long days beating up the sealed strip. Saturday proved a good solid day of flying & Sunday just getting better, Monday however cracked out a stunning crisp morning of flying – chilly, but just amazing flying conditions. Super jealous of the runway.

Get this event booked in your calanders for next year!

Mark McCrorie

# Presidents Report

Hi Members

Well there is not much to report at the moment, but we are getting a good turnout down at the field on Sundays, good to see.

Can I please reminder every about communication in the flight box, now that we are getting a few more flyers down at the field on Sundays we need to remember to talk to each other of your action in the air.

I did notice last weekend that a couple of planes were flying a very narrow circuit. Please use the space we have.

The fencing will be under way soon, if not now! It will be nice to fly without all the sheep Sh- - around.

As you know our web site is up and going so if you have any pictures please send them on to me, and also for our magazine.

That's me for now happy flying.

Thanks

Mark Strawbridge

# RADIAN

Do you have a radian?

Are you interested in some gentle competition?

Many clubs around NZ are running fun radian events, lets get on the bandwagon!

## From The Building Bench

## F4U CORSAIR

Hi guys, here are some pics of some of the work i needed to do to fit the saito fg-90r3 engine, the whole front of firewall had to be cut off then install a keleo creations box to make the install go easier with the keleo collector ring.

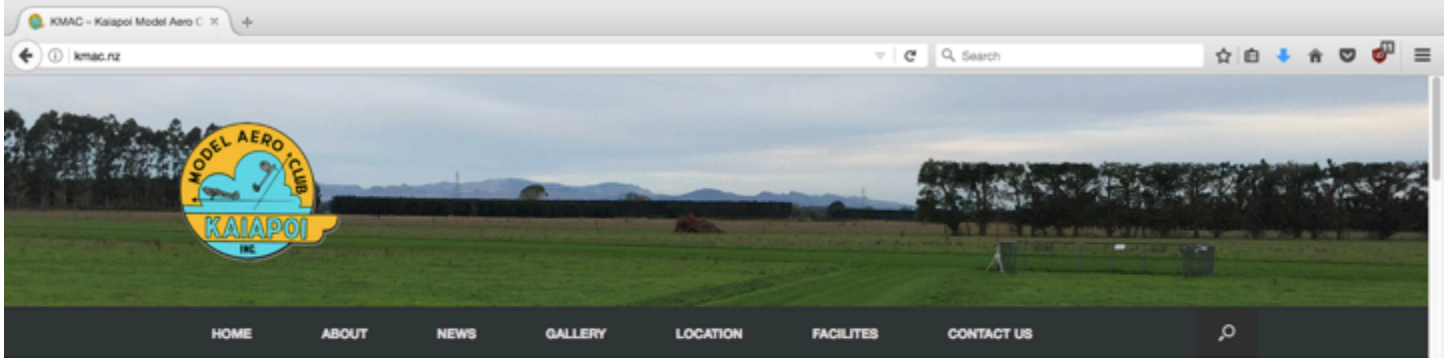

Plane is a hangar 9 corsair, with robart retracts, engine is swinging a 23/10 3 blade beila prop, this has been already over 6 months to date and expect it to be ready maybe early next year, as with the recently finished beast it has to go thru mfnz giant scale regulations.

Nick Fright
